Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This group of three two-story, two-bay wide early Italianate-style brick houses with shed roofs and simple, scroll-sawn bracketed cornices were built c. 1875 – 1885. They are typical of a type of house seen particularly in southwest Baltimore that is only two rooms deep, but sits on a high basement containing the kitchen. None of the houses retain their original brick facades, which were always painted. The entire facades have been covered with formstone, or stuccoed, and no original details remain.

The houses are two stories in height, 12' 6" wide and occupy lots 62' deep. 332 S. Norris St. is a three-story house, three small rooms deep, with no backbuilding. 334-336 S. Norris St. are two-stories high and only two rooms deep, sitting on high basements which contain the kitchen. The houses are probably constructed in running bond and were originally painted. Each house has a single hooded chimney located at the rear corner of the house. The shed roofs were probably capped by a wooden cornice consisting of a crown molding supported by simple scroll-sawn brackets or simple grooved modillions, but all of the cornices have been removed.

The tall, narrow window and door openings probably had flat wood lintels and sills. All windows are filled with 1/1 replacement sash. Doorways probably had a single-light transom, but these too are covered over. The houses sit on high basements, lit by a double-hung sash. Each house is reached by seven to nine concrete steps. 334-336 have street level doors opening into the basement kitchen.

Specific dates c. 1875 - 1885

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses significant as representing the level of architectural stylishness builders were willing to give to small street houses in the late nineteenth century and is testament to the fact that there was no stigma attached to small street living. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period c. 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide three-bay-wide, two-story houses on the main streets, and smaller, 11' to 13'-wide two-bay-wide, two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 - \$1,500; small street houses for \$700 - \$900.

Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the Baltimore & Ohio railroad yards and related industries and to the slaughterhouses of southwest Baltimore and their related industries, particularly the William Wilkens & Co. Curled Hair Manufactory, one of the largest employers in the area. Moderately-priced housing was built to provide homes for the mainly German immigrants who came to southwest Baltimore to work in these rapidly expanding industries in the decades after the Civil War.
